Bachelor of Fine Arts - Graphic Design

## SKILLS

Ruby | Javascript | HTML | CSS  
Git | Sinatra | Rails | ActiveRecord | SQL | PostgreSQL | RSpec | React

Graphic Design | Wireframing | Illustration | Photography | Branding  
Photomanipulation | Prepress | Adobe Creative Suite

## RELEVANT PROJECTS

### **WaitLess** • [wait-less.herokuapp.com](https://wait-less.herokuapp.com)

A one-week group project written in Ruby on Rails and Javascript. The application is designed to help the user look for a nearby restaurant, sign up to the wait list of the restaurant of their choice and receive a notification once their table is ready.

My area of focus:

- implement GoogleMaps Javascript API to find restaurants nearby user's location
- created AJAX calls to add pins on the map using Yelp query results
- pair programmed on a background job that sends the user a notification using Sidekiq and Redis
- applied timer to restaurant wait time and set up migrations to fix existing database tables

### **Writefast Predictive Text Editor (Hackathon Winner)** • [writefast.herokuapp.com](https://writefast.herokuapp.com)

A two-day group hackathon project that helps students create, edit, save, and revise documents. The student can upload images into the document to facilitate Read, Draw, Write strategies. Use text-to-speech accessibility tools to read the document they are writing, and words they want to add before adding them to the document.

My area of focus:

- setup routes and implemented sessions in Sinatra
- used bcrypt gem for authentication
- login error handling

## PROFESSIONAL EXPERIENCE

### **Graphic Designer**

**Victory Team Apparel** | San Diego, California | July 2013 - Dec 2014

- redesigned the Campus TeamWear Cheerleading Apparel catalog
- created a style guide for the redesigned catalog
- photoshoot and edit images for catalog and web
