PROJECTS

eventFindr   chrome.google.com/webstore/detail/eventfindr
A Chrome extension that uses the Eventbrite API to help the user find events in a particular city they want. The user can choose to display events happening during the same week or the next weekend.

finda car   findacar.firebaseapp.com
A single page app built using React that lets a user search a rental car by date, time and location. The app displays the available cars using data from Hotwire API.

giglandia   giglandia.herokuapp.com
Lets a user find a band to see their tour schedule. The user can sign up or sign in and favorite as many bands as they like. Built in Ruby, Sinatra, jQuerymobile, Songkick API and Echonest API.
